

Tune in every month to learn what's coming next to MultiValue

Our partners and customers have been asking for a long time, so we're doing it! The Rocket MultiValue product management team now hosts monthly livestreamed updates of the MV product roadmaps for UniVerse, UniData, D3, and other tools. They'll present on both our near-future and distant-future plans for MV, as well as the many possibilities we're still thinking about. But the only way to learn is to be there!

Every month, you'll get new MultiValue insights directly from Rocket development leaders and exclusive previews of new products, such as the upcoming Rocket Connection Manager. Hear the latest updates as they're announced and always be in the know.*

Roadmap updates will take place on the 3rd Wednesday of every month, with broadcast times alternating between [7:00 pm EST and 11:00 am EST](#) to include as many territories as possible. Please note that these roadmap livestreams will not be recorded or available after airing, so you must tune in live if you want the inside scoop on all things MultiValue. Tell your friends!

[REGISTER FOR THE LIVESTREAM](#)

**Note: Preview functionality and timelines are subject to change. We advise against Rocket partners and customers making any business decisions based on pre-release content discussed in our monthly updates.*
